

Education & Training

Never too late to learn

Australia has the largest proportion of international tertiary students per head of university student population of any of the major providers of international education in the world.

Education - why Australia?

- > Australian qualifications are internationally recognised.
- > Professionals with Australian qualifications are internationally mobile and highly sought after.
- > Australian qualifications are linked nationally so students can move between educational sectors (ie vocational training to university).
- > Australia is a safe, multi-cultural country with a great lifestyle.

Where students study

International students study in Australian schools, vocational training institutes and colleges, English language schools, universities and community colleges. Australia also offers distance and online learning.

Many Australian education programs are offered offshore so students can study for Australian qualifications in their own country or combine with studying in Australia.

Vocational education training

Public and private vocational training institutions deliver training focused on the workplace. Courses range from accounting and applied science to business studies, tourism and hospitality and include trade courses, such as plumbing and carpentry.

International students are attracted to study VET in Australia because they develop practical skills for the workplace. Another advantage is that Australian qualifications are linked nationally, so VET study is part of a recognised pathway to advancement and a future university degree.

Overseas students have a wide range of VET institutions to choose from with over 660 colleges to choose from and more than 7,000 VET courses, registered on the Commonwealth Register of Institutions and Courses for Overseas Students (CRICOS).

Corporate trainers and consultants

Australian corporate trainers and consultants have always been well regarded internationally and are increasingly in demand for their expertise and experience.

Projects Australian trainers and consultants are employed for include:

- assisting with curriculum development
- training in joint programs or on a consultancy basis
- delivering in-house training programs to corporations and government departments
- providing distance education and online learning programs
- collaborating on research projects with industry and government
- working on projects via the Asian Development Bank, the World Bank, AusAid, non-government organisations and private agencies
